Abstract

We propose an Example-Based Machine Translation system. The examples were extracted from the Bible, book of Matthew, given in Greek, English and Portuguese and annotated according to Strong's annotation. The examples were arranged as words, bigrams and trigrams. Given a new sentence, we translated n-grams ($1 \leq n \leq 3$) according to the examples and assembled them producing the translated sentence. We tested this procedure by translating the book of Mark from Greek to English and to Portuguese based only on the verses of Matthew. In this paper, we present the chapter 1 of Mark translated by this way. The procedure is very easy to implement and the results show a promising way for translating.

keywords: Example-based machine translation, n-grams, finite state machine.

1 Introduction

The reference (0) presents many methods used in machine translation. In particular, "Example-based machine translation proposes translation by examples collected from past translations." Our system (our research in machine translation started from (0)) uses examples collected from the Bible (0) in Greek and its translations in Portuguese and English. The examples are annotated with numbers (James Strong annotation) which yields a corpus alignment. From the examples we extract words, bigrams and trigrams with their translations and assemble a finite state machine. The translation of a new sentence is done by identifying the words, bigrams and trigrams that were already seen and assigning the corresponding translations. We assemble these translations in order to get the translated sentence.

The reference (0) presents several tasks in which N-grams has been used (in his own words):
1) part of speech tagging
2) finding collocations of technical terms for use in machine translation
3) constraining language models, aiding disambiguation, retrieving texts from large databases, and compiling lexico-syntactic facts for identifying normal and conventional uses of a given word
4) aiding disambiguation of prepositional phrase attachment
5) estimating the probability of previously unseen collocations based on "similar" words.

Although the idea of using n-grams for translating is very simple, so far we did not find a reference to a previous work. We would like to add "translating" to the above list. We choose the Bible as the basis for our examples because it has been studied for centuries, translated to many idioms and in particular, James Strong provided a careful annotation that can be used to make a precise alignment between many versions of the Bible given in many idioms.

2 Strong's annotation

To each word in Greek (or Hebrew), James Strong assigned a number. For example, the original verse in Greek is:
John 1:1 en [1722] arch [746] hn [2258] (5713) o [3588] logoj [3056] kai [2532] o [3588] logoj [3056] hn [2258] (5713) proj [4314] ton [3588] qeon [2316] kai [2532] qeoj [2316] hn [2258] (5713) o [3588] logoj [3056]

which was translated to English as:
John 1:1 ¶ In [1722] the beginning [746] was [2258] (5713) the Word [3056], and [2532] the Word [3056] was [2258] (5713) with [4314] God

[2316], and [2532] the Word [3056] was [2258] (5713) God [2316].

or in Portugese as:
João 1:1 ¶ No [1722] princípio [746] era [2258] (5713) o Verbo [3056], e [2532] o Verbo [3056] estava [2258] (5713) com [4314] Deus [2316], e [2532] o Verbo [3056] era [2258] (5713) Deus [2316].

Looking the numbers, we can identify, for instance, that the greek word "logoj" (number 3056) was translated to "the Word" in English or "o Verbo" in Portuguese. However, we note that "logoj" can also be translated in a different way according to the context. For instance, in Matthew 5:37 "logoj" was translated to "communication" in English or "word" in Portuguese. We present Matthew 5:37 in Greek, English and Portuguese:

Matthew 5:37 estw [2077] (5749) de [1161] o [3588] logoj [3056] umwn [5216] nai [3483] nai [3483] ou [3756] ou [3756] to [3588] de [1161] perisson [4053] toutwn [5130] ek [1537] tou [3588] ponhrou [4190] estin [2076] (5748)

Matthew 5:37 But [1161] let [2077] [0] your [5216] communication [3056] be [2077] (5749), Yea [3483], yea [3483]; Nay [3756], nay [3756]: for [1161] whatever is more [4053] than these [5130] cometh [2076] (5748) of [1537] evil [4190].

Mateus 5:37 Seja [2077] (5749), porém [1161], a tua [5216] palavra [3056]: Sim [3483], sim [3483]; não [3756], não [3756]. O que disto passar [4053] [5130] vem [2076] (5748) do [1537] maligno [4190].

We expect that using bigrams or trigrams we can identify a better context and thus getting a better translation.

3 The trigrams

Given a verse, we break it in trigrams. For instance, given:

John 1:1 en [1722] arch [746] hn [2258] (5713) o [3588] logoj [3056] kai [2532] o [3588] logoj [3056] hn [2258] (5713) proj [4314] ton [3588] qeon [2316] kai [2532] qeoj [2316] hn [2258] (5713) o [3588] logoj [3056]

Table 1: Finite state machine

state	word	next state
0	en	1
1	arch	2
2	hn	3
0	arch	4

Table 2: Translation of the states

state	translation
1	In
2	In - the beginning
3	In - the beginning - was
4	the beginning

we break in the following trigrams:
(en, arch, hn)
(arch, hn, o)
(hn, o, logoj)
and so on.

These trigrams are assembled in a finite state machine. A small fragment of this machine is given in Table 1.

To each state, besides the initial state "0", we assign a translation according to the Strong's annotation. The translation of the previous states is given in Table 2.

It is possible to have multiple translations to the same state, therefore we count the number of times that each translation was used. We have another structure that has the best translation (the translation that appeared most) to each state. A translation assigned to one state may correspond to a translation of a word, bigram or trigram depending on how far the state is from the initial state.

4 The translation

For this experiment we start from the very simple idea that translation is just "exchanging words". We use the finite state machine to identify words, bigrams and trigrams. For each "matching" we assign a translation. Therefore it is possible to have many translations to only one greek word. The preference is for the translation given by a trigram, and then by a bigram and at last by a single word. When 2 trigrams suggests 2 translations for a same word, then we get the suggestion from the most right trigram (and so for bigrams and words).

We are not concerned in exchanging the or-

der of the words in the translated sentence (in Greek, it is normal to put the possessive pronoun after the substantive), although this information can be taken from the examples. A very easy approach is to exchange word order according to the n-grams, however, we loose uniformity. For instance, for some cases the possessive pronoun will appear in the right position and for another cases in the wrong position. We choose to have more uniformity (and simplicity) than some cases in a right way. We are still studying how it can be done and we are presenting new results in a near future.

5 Results

The book of Mark was translated from Greek to Portuguese and to English using our approach. The examples were taken from the book of Matthew in Greek, English and Portuguese. Here, we present the translation of Chapter 1 of Mark and compare both translations.

We present just the translation of Mark, chapter 1, in Portuguese and in English.

In Portuguese:
1:1 é o princípio [euaggeliou] de Jesus Cristo filho de Deus

1:34 and he healed many sick people various diseases and demons many things he cast out and not [hfien] spoke demons that [hdeisan] [auton]
1:35 And in the morning [ennucon] was exceeding he arose came out And and departed into a desert place and there [proshuceto]
1:36 and [katediwxan] him Simon and they that were with him
1:37 and [eurontej] him They say to him Because all [zhtousin] [se]
1:38 And he saith to them let us be going into [ecomenaj] [kwmopoleij] that and there [khruxw] into this For [exelhluqa]
1:39 And was preaching in synagogues their into all Galilee and demons [ekballwn]
1:40 And he cometh to him a leper beseeching him and kneeling down him and saying to him That if thou wilt thou canst me clean
1:41 But Jesus was moved with compassion put forth his hand and touched him And saith to him I will be thou clean
1:42 and [eipontoj] his immediately spread from his leprosy and [ekaqarisqh]
1:43 and [embrimhsamenoj] to him immediately he cast out [auton]
1:44 And saith to him See no man nothing thou tell but go thyself show to the priest and offer for [kaqarismou] thy commanded Moses for a testimony to them
1:45 But he went out began to preach many things and [diafhmizein] the word so that henceforth him [dunasqai] [fanerwj] in a city enter but outside in [erhmoij] [topoij] was and [hrconto] to him [pantacoqen]

6 Conclusion

Although there are many errors in the translation, it is possible to understand many verses. The results achieved this quality because the examples are in the same domain (Matthew and Mark are very close). Strong's annotation was used just for the alignment of the corpus. The same procedure can be applied using any other way of alignment ((0), (0)). Strong's annotation provides a richer information that we are not using: his annotation refers to the stems, so for instance, the word "komoj", "kosmw", "kosmon" and "kosmou" are assigned to the same number ([2889]). This information can be used in future improvements of our system. The Portuguese translation shows to be better than the English translation due to:
- English word order are much more severe than in Portuguese.
- The correspondence between words are more straight in Greek-Portuguese than Greek-English. For instance: English verbs need the subject in a explicit way causing the insertion of pronouns in the text. In Matthew 2:9 the greek word "eporeuqhsan" [4198] (5675) was translated as "partiram" in Portuguese and as "they departed" in English. Another difference is the use of modals. Matthew 2:9 is presented in Greek, English and Portuguese:

Matthew 2:9 oi [3588] de [1161] akousantej [191] (5660) tou [3588] basilewj [935] eporeuqhsan [4198] (5675) kai [2532] idou [2400] (5628) o [3588] asthr [792] on [3739] eidon [1492] (5627) en [1722] th [3588] anatolh [395] prohgen [4254] (5707) autouj [846] ewj [2193] elqwn [2064] (5631) esth [2476] (5627) epanw [1883] ou [3757] hn [2258] (5713) to

[3588] paidion [3813]

Matthew 2:9 ¶ When [1161] they had heard [191] (5660) the king [935], they departed [4198] (5675); and [2532], lo [2400] (5628), the star [792], which [3739] they saw [1492] (5627) in [1722] the east [395], went before [4254] (5707) them [846], till [2193] it came [2064] (5631) and stood [2476] (5627) over [1883] where [3757] the young child [3813] was [2258] (5713).

Mateus 2:9 ¶ Depois [1161] de ouvirem [191] (5660) o rei [935], partiram [4198] (5675); e [2532] eis [2400] (5628) que a estrela [792] que [3739] viram [1492] (5627) no [1722] Oriente [395] os [846] precedia [4254] (5707), até que [2193], chegando [2064] (5631), parou [2476] (5627) sobre [1883] onde [3757] estava [2258] (5713) o menino [3813].

For our approach the closer the 2 languages, the better. Hence, this kind of translation must be very suitable for Portuguese-Spanish texts.
